

# LNER Engineering Energy & Environmental Policy

In line with the **ENERGY & ENVIRONMENTAL POLICY STATEMENT BY THE MANAGING DIRECTOR** - the Engineering Energy & Environmental Policy is committed to reducing our environmental impact and continually improving our environmental performance as an integral and fundamental part of our business strategy and operating methods.

The Senior Management Team (SMT) will demonstrate leadership and commitment, bearing the responsibility for establishing, implementing and maintaining the Energy & Environmental Management System (EEMS). We believe that businesses are responsible for achieving good environmental practice by operating in a sustainable manner. We are therefore committed to reducing our environmental impact. It is our priority to encourage our customers, suppliers and all business associates to do the same.

Our policy is to:

- Wholly support and comply with or exceed the requirements of current environmental legislation and other requirements.
- Minimise our waste and recycle as much of it as possible, seeking to minimise the use of potentially hazardous materials and expanding our practice of material segregation to allow increased recovery and recycling of waste materials.
- Minimise energy and water usage in our buildings, vehicles and processes in order to conserve supplies, and minimise our consumption of natural resources, especially where they are non-renewable.
- Operate and maintain company vehicles (where appropriate) with due regard to environmental issues as far as reasonably practical.
- Provide a framework to promote energy efficiency throughout our supply chain (via our Procurement Quality Procedures and processes) and promoting energy management to our employees.
- As far as possible purchase products and services that do the least damage to the environment and encourage others to do the same, promoting appropriate waste management practices to our supply chain.
- Assess the environmental impact of any new processes or products we intend to introduce in advance.
- Apply the principles of continual improvement in respect of air, water, noise and light pollution from our premises and reduce any impacts from our operations on the environment and local community.
- Not to cause any pollution to the Environment.

Through direction and support, each employee will have a full understanding of the importance of the Energy & Environmental Management System, their responsibility to contribute to its ongoing effectiveness and its direct relevance to the success of Engineering. Equally, every engineering team member is responsible for, and will be trained to perform the duties required by his/her specific role.

LNER Engineering has a policy of promoting continual improvement and setting of Energy & Environmental Objectives in line with the framework established within the ISO14001:2015 & BS EN ISO 50001:2011 Standards. These objectives will address the risks and opportunities within Engineering, as determined by the Senior Management Team and Engineering Assurance Function, and are noted in our Environmental Objectives - Our Commitment to the Environment Charter.

This Energy & Environmental Management System will be monitored, measured, evaluated and enhanced regularly by the Senior Management Team, with regular reporting and communication of its status and effectiveness at all levels via the Engineering Assurance Function. We will review our Energy & Environmental Policy in the event of changing circumstances such as legislative or organisational changes.

We hereby certify that our Engineering Energy & Environmental Manual (EM-1) and associated AC-EM Aberdeen Clayhills Energy & Environmental Management System Manual (and associated procedures) accurately describe the Energy & Environmental Management System in use within LNER Engineering to meet the requirements of ISO14001:2015 & BS EN ISO 50001:2011

John Doughty - Engineering Director
